

CreativExchange

Inspiring Surface Design

MYKON

The Customer

CreativExchange is a project based in St. Neots, funded by Huntingdonshire District Council. It comprises of studio-style offices designed to encourage idea generation and innovation within creative industries.

The Challenge

CreativExchange would provide a haven to nurture and develop new businesses in the local area. The council would be working in conjunction with their chosen architects (5th Studio, Cambridge) and the CreativExchange team.

The brief given to the project's architects was to create a stimulating environment for employees and businesses using the centre. To encourage this, the design of the building and materials had to encapsulate the CreativExchange's ethos in terms of encouraging creativity.

The Solution

Mykon's B Clear panels were chosen for a number of reasons, primarily for their unique aesthetic qualities and sustainability, but most importantly because of their light-dispersing qualities. The panels were used underneath the staircase to increase the flow of light into the corridor and surrounding area.

The Outcome

The B Clear panels compliment the rest of the building's design perfectly and meet the objectives set in the brief regarding the use of light. The client is very happy with the outcome and would happily consider Mykon for future projects.

B Clear

Aluminium honeycomb core encased in glass or acrylic skins.

Each individual cell allows light to pass through, but together the cells remain translucent to ensure privacy when it is required.

Lightweight but strong, B Clear is ideal for incorporating into partitions, screens and floors.
