Inspiring Surface Design

MYKON

Unforgettable furniture applications

Updating or creating a new piece of furniture using Mykon panels is a great way of making an unforgettable and unique piece for the home or office.

Mykon can update your drawers, cupboard doors or even chairs or tables in the kitchen or bedroom. The panels can even be used for shelves for a book case or storage unit.

Different shapes, sizes and colours can be accommodated to match the decoration in your house or garden due to the wide variety of glass, acrylic and polycarbonate skins available. Mykon can also print patterns and designs onto the inside skin of the panel.

Strong yet lightweight

The aluminium core encased between the outer skins of Mykon panels combines supreme strength with lightweight durability, for an innovative design with a practical purpose.

Visually beautiful

Mykon furniture connects durability with beautiful optical effects for practicality and sophistication. The honeycomb design diffuses and reflects light to add sparkle to any room. Meanwhile, the individual handmade design means that no two glass tables are identical - so a Mykon table is not simply an item of furniture, but a work of art.

Optional extras

- Aluminium, clear or coloured edging available

Construction

- Toughened glass skins
- Aluminium honeycomb core or pressed aluminium sheet
- UV stable bonding adhesive

Select your product

Specification

B Clear, B Clear 'The Series'*

Thickness 15-100mm (standard 25mm)
 Maximum length: 3000mm
 Maximum width: 1500mm
 (*Iris Max Panel Size 2440 x 1220mm)

Shatter retention system

In the unlikely event that the glass should fracture, the composite structure retains the glass pieces, preventing the kind of shattering to which ordinary glass is prone and reducing the risk of injury.

Fire rating

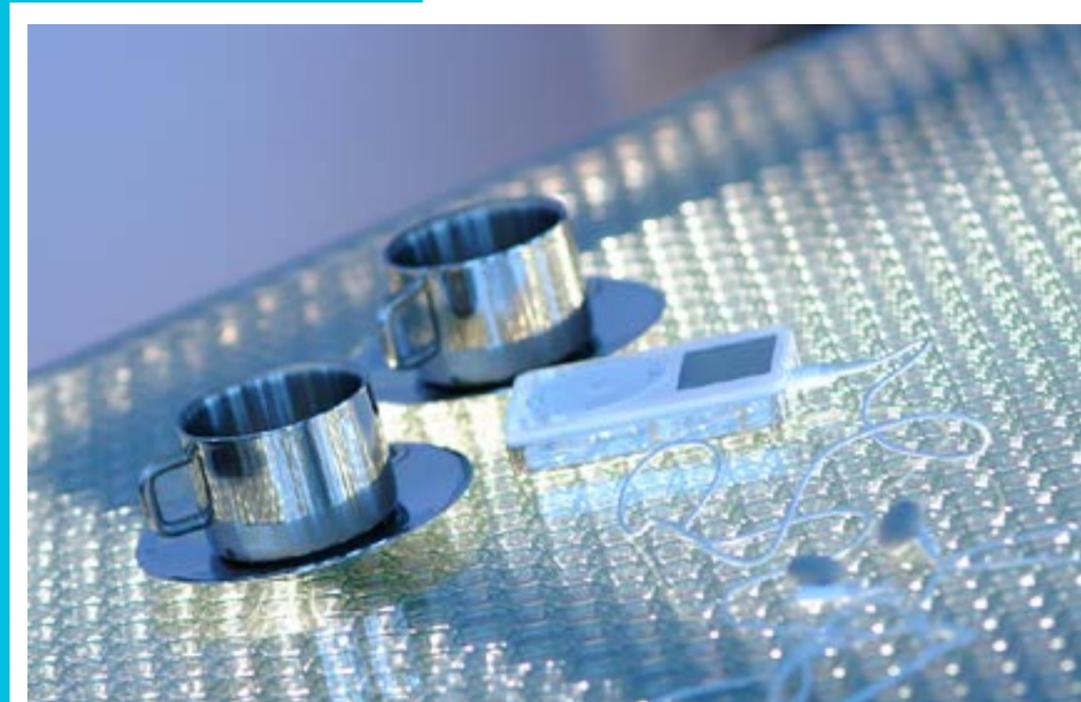

Mykon furniture panels do not currently hold a fire rating certificate, but the individual elements of the panel itself are incombustible, i.e. the panel does not burn, ignite, add to the fire load, or spread surface flame.

Outdoor use

Mykon panels can be used outside in garden furniture. We particularly recommend Iris panels to provide an eye-catching rainbow effect when used in natural daylight; perfect for jazzing up any tired old alfresco dining sets.
