

MTV On-Air

Inspiring Surface Design

MYKON

The Customer

MTV is the world's most-watched television network and the leading multimedia brand for youth. This project involved re-vamping the offices of MTV On-Air.

MTV On-Air is made up of a creative team of designers. Based in London, these designers create animation and graphics for MTV Networks Europe. The architect responsible for the project was Yen-Yen The, director of Emulsion Architecture.

The Challenge

The challenge was to create an inspiring environment, using good design and space planning and interesting materials. The environment needed to reflect the designers' innovative roles and provide them with a creative space in which to work.

One of the products that needed to be sourced was a partition wall for the conference and IT rooms. This was required to allow light to be transmitted, but at the same time provide privacy and also aesthetic interest.

The Solution

Mykon's B Clear panels had been shortlisted due to their light-transmitted properties. Yen-Yen decided to use the B Clear panels with polycarbonate skins. The partitions were then framed with aluminium sections built by ABA Building and Design to Emulsion's own bespoke design detail. Both Emulsion and MTV were happy with the finished look. Today, the panels in the MTV office intrigue visitors and staff alike.

B Clear

Aluminium honeycomb core encased in glass or acrylic skins.

Each individual cell allows light to pass through, but together the cells remain translucent to ensure privacy when it is required.

Lightweight but strong, B Clear is ideal for incorporating into partitions, screens and floors.
